PRODUCT INFORMATION

快飛 "Kattobi" Tuning kit AIR

Bait Finesse Special

New model of AIR bearing, which has overwhelming rotation capacity, is now released.
The new model is really good at cost performance.
The housing of AIR BFS（Bait Finesse Special）is detachable so that you can replace just the bearing when it become worn.
The super micro ball, which is feature of AIR bearing, is high-precision stainless-steel. The rotation is very smooth and silent.
The performance is quite helpful to cast light-weight lures.

Bait Finesse Special

Super Micro Stainless Ball

[Japanese-made micro ball]
The Micro Ball specialized for finesse fishing is adapted.
The high-precision stainless-steel creates very long and silent rotation.

Lightweight Al Housing

[Aluminium Housing]
Compare to common bearings,
50% reduction in weight is succeeded.
Stopper ring is fixed in the housing.
The main bearing is replaceable easily.

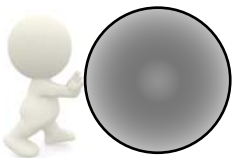
The conventional bearings

The ball size of the general bearing
(same size as the above bearing).
With such small difference,
the difference of rotary torque between
this and micro ball is like night and day.
The resistance increases with the big balls,
and the rotation response becomes worse.

The reason why the ball size of bearing is important.

Which ball of bearing can you push with light power?

So heavy!! (><)



Ball size
in common bearing

Light&Easy ♪ (^^)

Ball size
in AIR bearing

Bearing lineup

730AIR BFS size : 3mm×7mm×3mm
830AIR BFS size : 3mm×8mm×4mm
1030AIR BFS size : 3mm×10mm×4mm
1040AIR BFS size : 4mm×10mm×4mm
1150AIR BFS size : 5mm×11mm×4mm

MADE IN JAPAN
