

快飛 "Kattobi" Tuning kit ZR

This bearing is for use specially in super-long cast.
The all-round bearing can handle various lure weight from 5g to 50g or more.
The stable rotary performance achieved by highly precise stainless steel brings the growth of comfortable flying distance.

While being reasonable, the cast feeling is much better than ordinary ceramic bearing use.
It is all stainless steel bearing of HEDGEHOG STUDIO's specialty.

The surface of the bearing is open type and the back side is shield type, which improves the maintenance performance.

Q. Is it necessary to clean HEDGEHOG STUDIO bearings before attaching to reel?

A. No, it isn't.
Generally, bearings available on the market for industrial use and hobbies have no good rotation very often, because relatively hard grease is often clogged up in the inside of the bearing and some dust get inside of the bearing.

Haven't you purchased the bearing of such low-priced editions, washed the them yourself and used them up to now?
Have you ever experienced to heard some noise or felt some rumbling from bearings after cleaning them thoroughly?
You never get good results no matter how many times it its washed, as long as the accuracy of bearing is bad.

All bearings of HEDGEHOG STUDIO are tuned up and coordinated "Just for fishing reels".
All the bearings are selected one by one by our craftsman's hand after assembly, and only the bearings with excellent rotation performance pass the checks.
And they are filled up with the "Alchemy Oil" developed only for the bearing, and are shipped.

Therefore, it is not necessary to clean or to lubricate oil of a different manufacturer since our bearing condition is the highest in performance when they arrive to you.
You will be able to get the best performance by just opening the package of bearings and setting them to your reel.

Lineup

730ZR size : 3mm×7mm×3mm 1030ZR size : 3mm×10mm×4mm 1150ZR size : 5mm×11mm×4mm
830ZR size : 3mm×8mm×4mm 1040ZR size : 4mm×10mm×4mm
